SILICONE CARE

In order to prolong the life of the silicone seams, we recommend the following care techniques:

- To eliminate staining and soap scum buildup after use, remove the excess water from the panels by towel drying or squeegeeing and patting dry the silicone seams
- When cleaning the silicone seams, a wet cloth is recommended using a non-abrasive cleaning product. Using a cloth that is too dry creates more friction which in turn can cause a breakdown of the silicone seal. It is normal for a little bit of flaking to occur. DO NOT scratch off...the flaking will fall off on its own
- Never clean your silicone seam with a toothbrush or any other type of scrub brush as this will cause a breakdown of the seam.
