INFORMATION SHEET FOR STEAM SHOWERS

This information sheet has been developed to provide our customers with additional information on how cultured marble, granite or onyx is used in steam showers.

The installation process for steam showers is slightly different than our standard shower panel installation. Due to the extreme heat in a steam shower which causes expansion and contraction of the panels, we **strongly** recommend plywood sheeting be used on the walls to adhere the panels to. We believe this to be the safest way to install our panels to reduce the likelihood of issues in the future.

We also recommend you check the silicone seams in your steam shower on a regular basis. Extreme heat can cause the silicone seams to break down at a faster rate than a normal shower.

As Improvisions/Marblevisions has no control over the amount of usage, care and maintenance each individual has with their steam shower, our warranty on steam showers is limited.
